INDIVIDUAL ASSIGNMENT

Freelancer Project & Income Tracker

Objective

Develop a full-stack **Freelancer Project & Income Tracker** that allows freelancers to manage their clients, active projects, and financial earnings. This assignment is designed to evaluate your understanding of frontend development, backend/API development, database handling, authentication, Git workflow, and problem-solving skills.

Required Features

- User registration and login functionality (JWT authentication & protected routes).
- Dashboard displaying active projects, total income, and pending payments.
- Add, edit, and delete clients and project details (including project name, client, status, and fee).
- Track income and payments, and implement search/filter functionality by project status or client.
- Visual representation of monthly income or project status using charts (e.g., bar or pie charts).
- Implement proper form validation and error handling.
- Create a responsive and user-friendly interface.

Optional Features: Pagination for the project and income history, exporting income reports/invoices to CSV or PDF, and additional UI enhancements.

Technical Expectations

- **Frontend:** Use React.js OR Angular.
- **Backend:** Develop backend APIs using Node.js and Express.js.
- **Database:** Use MongoDB and Mongoose.
- **Security:** Implement authentication using JWT and bcrypt.js.
- **Testing & Version Control:** Use Git/GitHub for version control.
- Maintain regular Git commits and complete the project individually. Follow proper coding practices.

Expected Deliverables & Submission

A well-formatted **README.md** file including setup instructions, technologies used, project explanation, and essential screenshots highlighting main features.

Create a document (PDF or Word) containing only the following details to be submitted via the specific upload link provided later:

1. Your Name
2. GitHub Repository Link
3. Public Google Drive Demo Video Link (3-5 minutes)

DEADLINE: 13/10/2026 - 3:00 PM

Important Notes

- The GitHub repository **must be public**.

- The Google Drive demo video link **MUST be public** (accessible to anyone with the link).
- Maintain regular Git commits to show your progress.
- Ensure the README.md file is properly formatted and well-written.
- Ensure the user interface (UI) is responsive and user-friendly.
- This is an **individual assignment**. Each member should submit their own implementation.
